

## Oracle Essbase 11.1.2 Bootcamp (11.1.2.4)

**Duration:** 5 Days

### What you will learn

This Oracle Essbase 11.1.2 Bootcamp teaches you the principal techniques and theories to design Essbase block storage databases. Block storage databases are deployed independently for budgeting, forecasting and planning, and as the underlying data storage and analytic engine for Hyperion Planning applications.

Learn To:

Create block storage databases.

Build rules files.

Analyze data with Smart View.

Create basic calculations.

Extend analysis capabilities.

Create a database outline, load data into the database and analyze data with Smart View.

Perform advanced analysis on the database by implementing varying attribute dimensions and typed measures.

### Benefits to You

Learn how to improve your organization's performance through better, more informed decisions using Oracle Essbase, the market leading online analytical processing (OLAP) server for Enterprise Performance Management. Become more efficient at forecasting, variance analysis, root cause identification, scenario planning and what-if modeling to better align your organization's resources and improve business results.

### Calculation Scripts

During this course, you'll also create calculation scripts (to calculate data for different scenarios). Design discussions and hands-on activities will help you practice the new skills you're learning.

\*This course is also suitable for customers using Oracle Essbase 11.1.1.

### Audience

Business Analysts

Business Intelligence Developer

Database Administrators

Database Designers

Developer

### Course Objectives

Create block storage databases

Create dimensions using rules files

Load data using rules files

Analyze data with Smart View

Describe multidimensional calculation

Create basic database calculations

Analyze dimension attributes

Analyze non-numeric data

## Course Topics

### Essbase Overview

Multidimensional Analysis

Oracle's Enterprise Performance Management System

Oracle BI Foundation Suite

Essbase

Production Environment Components

### Designing Applications and Databases

Essbase Implementation Process

Analyzing and Planning Implementations

Creating Applications and Databases

Creating Outlines

### Designing Data Descriptor Dimensions

Data Descriptor Dimensions Overview

Designing Time Dimensions

Designing Scenario Dimensions

Outline Calculations

Designing Accounts Dimensions

Testing Outline Calculations

### Optimizing Data Descriptor Dimensions

Creating Member Aliases

Dimension Types

Creating Period-to-Date Totals

Dynamic Calc Members

Enhancing Accounts Dimensions

Optimizing Data Storage

### Developing Dimension Designs

Business View Dimensions Overview

Attributes in Database Design

Combining Business Views

Developing Label Outlines

## **Creating Basic Dimension Build Rules Files**

Rules Files Overview

Creating Dimension Build Rules Files

Configuring Dimension Maintenance Settings

## **Creating Advanced Dimension Build Rules Files**

Advanced Dimension Build Rules Files Overview

Creating Shared Members

Manipulating Fields

Creating User-Defined Attributes

Creating Attribute Dimensions with Rules Files

## **Loading Data**

Data Load Overview

Creating Data Load Rules Files

Selecting and Rejecting Records

Capturing New Members

## **Getting Started with Smart View**

Navigating Smart View

Connecting to Data Sources

Creating Ad Hoc Grids

Setting the Point of View

Associating Data Sources with Worksheets

Creating Free-Form Grids

## **Creating Reports with Smart View**

Updating Essbase Data

Integrating Essbase Data with Microsoft Office

Creating Shared Database Perspectives

Creating Custom Reports

## **Data Storage and Calculation**

Calculation Overview

Database Calculation Order

Data Block Fundamentals

Data Blocks and the Index System

Interpreting Database Statistics

Data Block Creation

Database Calculation Process

## **Creating Calculation Scripts**

Calculation Script Organization

Returning Correct Calculation Results

Troubleshooting CALC DIM Processes

## **Controlling the Calculation Process**

Top-Down Calculation

Focusing Calculations with FIX Statements

Calculating Conditionally with IF Statements

Performance Considerations

## **Referencing Members in Calculations**

- Referencing Members Explicitly
- Referencing Members Dynamically
- Creating Calculation Variables

## **Developing and Testing Complex Calculation Scripts**

- Implementing a Script Development Process
- Upper-Level Data Loads
- Intelligent Calculation

## **Normalizing Data**

- Allocating Data
- Planning Data Normalization
- Normalizing Rates and Drivers
- Copying and Clearing Data

## **Creating Attribute Dimensions**

- Attribute Dimensions Overview
- Adding Attribute Dimensions to Outlines
- Design Considerations

## **Analyzing Varying Attributes**

- Varying Attributes Overview
- Creating Varying Attributes
- Viewing Varying Attribute Data

## **Analyzing Text and Dates**

- Typed Measures Overview
- Enabling Typed Measures
- Creating Text Measures
- Creating Date Measures
- Viewing Typed Measures
- Calculations Based on Typed Measures
